REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: The prior art of record fails to disclose a method and system for controlling wheel slip across a differential mechanism of a motor vehicle having a steering angle and a steering direction, the differential mechanism driven by a driveshaft and having first and second rotating output shafts driveably connected to the wheels and connectable by a clutch that is activated by a magnetic field of variable strength to change a torque capacity of the clutch, the method comprising the steps of comparing the speeds of the output shafts and the target speeds to determine whether wheel slip is present; and in response to the comparison, adjusting the magnitude of the field strength to increase the torque capacity of the clutch and control the speed of the output shafts such that the wheel slip is reduced; nor does the prior art disclose a clutch for changing a magnitude of transmitted torque comprising a first and second element driveably connected to the first and second control shaft respectively and also a chamber bounded by the first element and second element; magnetic powder located in the chamber; and an electromagnetic coil producing a magnetic field of variable strength passing through the chamber and magnetic powder and changing a capacity of the clutch to transmit torque between the first and second control shafts as the field strength changes. These limitations are neither taught nor obvious by the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Ito et al. (U.S. Patent No. 5,270,930) disclose a four wheel driving vehicle of a front/rear wheel differential operation limiting type.
